Reasons for allowance

The following is an examiner's statement of reasons for allowance:

The instant invention is deemed to be directed to an unobvious improvement to a casing assembly in an axial fluid flow turbomachine over U.S. Patent No. 4,787,817 which teaches an axial fluid flow turbomachine, a casing assembly 5 comprising: a plurality of casing segments 6a arranged in circumferential sequence, wherein circumferentially adjacent casing segments 6a abut each other along generally radially extending joints 6b, each casing segment 6a having circumferentially opposed ends 6c,6d and each of its opposed ends comprising at least one sealing face (not numbered) for abutting with a corresponding sealing face on a circumferentially adjacent segment, each casing segment 6a being mounted for limited pivoting movement about a pivot point 11a.

The improvement comprises pivoting movement of the casing segments causes the sealing faces to come into sealing contact with each other.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consist of four patents.

Colley (4,330,234) is cited to show a casing for a turbomachine having a plurality of casing segments and pivoting point for moving each casing segment but fails to teach pivoting movement of the casing segments causes the sealing faces to come into sealing contact with each other.

Smith (4,332,523) is cited to show a casing for a turbomachine and pivoting point for moving the casing but fails to teach a plurality of casing segments, and pivoting movement of the casing segments causes the sealing faces to come into sealing contact with each other.

Thompson et al. (4,863,345) is cited to show a casing for a turbomachine having a plurality of casing segments and pivoting point for moving each casing segment but fails to teach pivoting movement of the casing segments causes the sealing faces to come into sealing contact with each other.

Brandl et al. (6,672,831) is cited to show a casing for a turbomachine having a plurality of casing segments and pivoting point for moving each casing segment but fails to teach pivoting movement of the casing segments causes the sealing faces to come into sealing contact with each other.
